EDUCATION

University of South Florida

Aug 2022 – Dec 2026

Bachelor of Science in Information Technology, GPA: 3.55/4.00

Tampa, FL

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Distributed Systems Concepts, Operating Systems, Advanced Database Systems, Machine Learning

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C#

Full-Stack & Backend: React, FastAPI, Spring Boot, REST APIs, SQLAlchemy, HTML/CSS, Authentication, API Integration

Data & AI: PostgreSQL, MySQL, MongoDB, Redis, Pandas, NumPy, Scikit-learn, Apache Spark, Kafka, Airflow, dbt, pgvector, OpenAI API, Claude API

Cloud & DevOps: AWS (EC2, S3), Azure, Docker, Linux, Git, GitHub Actions, CI/CD

Engineering & AI Tools: Automated Testing, Integration Testing, Data Modeling, Logging, Debugging, Root-Cause Analysis, Technical Documentation, Codex, Claude Code, Cursor

EXPERIENCE

University of South Florida – Information Technology

Oct 2026 – Present

IT Support Intern – Classroom Technology

Tampa, FL

- Troubleshoot classroom technology, collaboration software, audio/video systems, and connectivity issues for faculty and students, identifying root causes and communicating technical solutions clearly.
- Monitor technical alerts, investigate failures, document recurring issues and resolutions, and coordinate with the Classroom AV Operations team to restore technology services efficiently.

Eximiuz Technologies

Jun 2026 – Aug 2026

AI & Data Engineering Intern

Remote

- Built Python, FastAPI, and SQL-backed application services, developing REST APIs, reusable backend components, validation logic, and ETL workflows.
- Integrated OpenAI and Claude APIs into classification and structured extraction workflows, adding validation and error handling to improve the reliability of AI-generated outputs.
- Debugged API, database, and data-processing issues using logs, SQL queries, automated tests, and root-cause analysis.
- Automated testing and deployment through GitHub Actions CI/CD and documented APIs, workflows, and implementation decisions to support maintainable software delivery.
- Collaborated with staff and a 70+ member organization to identify user needs and built Python automation for recurring workflows, reducing manual effort by approximately 25%.

TECHNICAL PROJECTS

FreightIQ – Full-Stack AI Operations Platform

🐙 GitHub

React, TypeScript, Python, FastAPI, PostgreSQL, Docker

- Built a full-stack application that converts unstructured freight documents into structured records and surfaces operational exceptions through a React and TypeScript interface.
- Developed FastAPI services, REST APIs, relational data models, and AI-powered extraction workflows, achieving approximately 92% extraction accuracy and reducing manual review time by 60%.
- Owned frontend/backend integration, automated testing, Docker, CI/CD, and debugging across application, API, and database layers.

PulseForge – Real-Time Distributed Data Platform

🐙 GitHub

Python, Apache Spark, Kafka, Airflow, dbt, PostgreSQL, FastAPI, React, Docker

- Built an event-driven platform that processes streaming commerce events through Kafka and Spark into structured PostgreSQL models and real-time operational metrics.
- Added incremental processing, retries, data-quality checks, and Airflow/dbt workflows to improve reliability and recovery across distributed data pipelines.
- Exposed processed data through tested FastAPI services and a React operations dashboard, connecting backend pipelines to user-facing analytics.

ApplyPilot – AI Retrieval & Matching Platform

🐙 GitHub

Python, FastAPI, PostgreSQL, pgvector, OpenAI API, Streamlit, Docker

- Built an explainable job-matching application using OpenAI embeddings and PostgreSQL/pgvector for semantic similarity, combined with skills, keyword, and experience signals.
- Implemented retrieval-grounded generation, FastAPI services, database migrations, provider error handling, and automated integration tests across end-to-end application workflows.
