EDUCATION

University of South Florida

Aug 2022 – Dec 2026

Bachelor of Science in Information Technology, GPA: 3.55/4.00

Tampa, FL

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Operating Systems, Distributed Systems Concepts, Advanced Database Systems, Computer Networks, Machine Learning

TECHNICAL SKILLS

Languages: Python, SQL, Java, TypeScript, JavaScript, C#

Backend & Full Stack: FastAPI, React, REST APIs, SQLAlchemy, PostgreSQL, MySQL, MongoDB, Authentication, API Integration

Data & AI: Apache Spark, Airflow, dbt, Pandas, NumPy, Scikit-learn, ETL/ELT, Data Modeling, OpenAI API, Claude API, LangChain, NLP

Cloud & DevOps: AWS (EC2, S3), Azure, Docker, Git, GitHub, GitHub Actions, CI/CD, Linux, Redis, Kafka, RabbitMQ, Celery

EXPERIENCE

Eximiuz Technologies

Jun 2026 – Aug 2026

AI & Data Engineering Intern

Remote

- Built Python, FastAPI, and SQL-backed application services, developing REST APIs, reusable backend components, validation logic, and data workflows from requirements through delivery.
- Integrated OpenAI and Claude APIs for structured extraction and classification workflows, implementing validation, error handling, and reliable downstream processing.
- Debugged API, database, and application issues using logs, SQL queries, and automated tests while supporting testing and deployment through GitHub Actions CI/CD.

University of South Florida – Information Technology

Oct 2026 – Dec 2026

Incoming Student AV Technician

Tampa, FL

- Selected for a 20-hour-per-week IT support internship supporting classroom technology and audio-visual operations across the university.
- Incoming responsibilities include troubleshooting AV and collaboration systems, responding to technical alerts, and communicating solutions to faculty and students.

Digital Engagement Center

Aug 2023 – May 2026

Student Engagement Leader

Tampa, FL

- Supported operations for a 70+ member student organization, gathering stakeholder needs and translating workflow problems into practical technical and process improvements.
- Built Python automation for recurring workflows, reducing manual effort by approximately 25% while improving consistency and team productivity.

TECHNICAL PROJECTS

PulseForge – Real-Time Data & Analytics Platform

🐙 GitHub

Python, Apache Spark, Airflow, dbt, PostgreSQL, Docker

- Built an event-driven platform that processes operational events through streaming pipelines and transforms them into analytics-ready warehouse models for revenue, payments, shipments, and refunds.
- Implemented Spark processing, incremental dbt models, PostgreSQL storage, and Airflow orchestration with retries, data-quality checks, and containerized services for reliable execution.

FreightIQ – AI Freight Intelligence Platform

🐙 GitHub

React, TypeScript, Python, FastAPI, PostgreSQL, Docker

- Designed and shipped a full-stack AI application that transforms unstructured freight documents into structured data and surfaces operational exceptions through a React and TypeScript interface.
- Built FastAPI services, relational data models, ingestion workflows, and validation logic, achieving approximately 92% extraction accuracy and reducing manual review time by roughly 60%.

MedFlow – AI Medical Scribe

🐙 GitHub

Python, Whisper API, LangChain, LLM APIs, Google Calendar API

- Built an AI application that converts speech into structured records by coordinating transcription, LLM processing, validation, and downstream application workflows.
- Implemented authentication, external API integrations, application state, error handling, and structured processing for reliable multi-step workflows.
